## Document Target

This document explains how to use **Bank Mobility** module from **Sage XRT Business Exchange 11.40 Service Pack 4**.

Flow 5 has been integrated and adapted to Clients with the following functions (they are all independent from each other):

- Concatenated File Breakdown (files containing several XML messages)
- PDF File Report
- File Breakdown
  - o Depending on the transaction: Transfers or Direct Debits
  - o Depending on the transaction type: SCT, SDD CORE, SDD B2B
- Conversion from XML to CSV
- File Info displayed and monitored in **Webmonitoring**
- Update of Third Party Info in **Payments**

Versions 3.9 for Sage Common Services and 2.0 for Bank Format Library are used.

## Before You Begin...

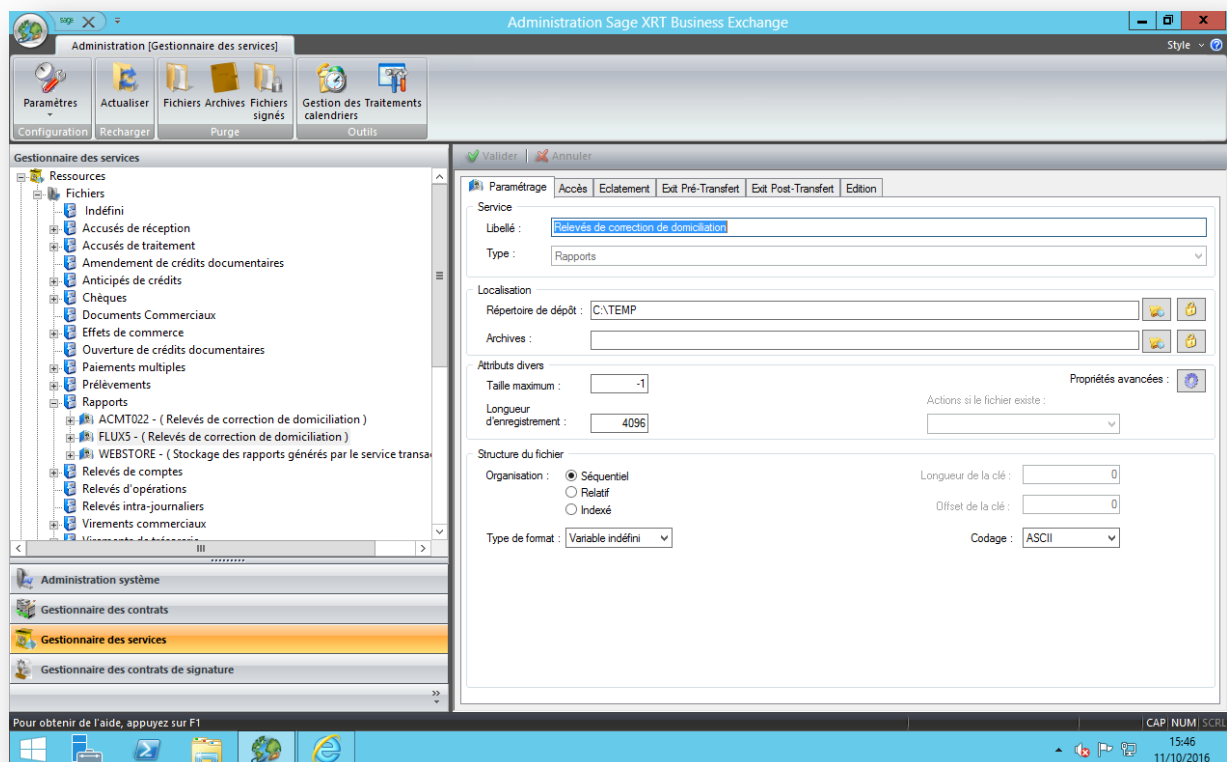

### Activating and Accessing Module

#### Service Manager

To use all the new functions of **Mobile Banking** from **Online Banking**, **WEBMON** and **PAYMENT** services must be updated from SXBE Services Manager.

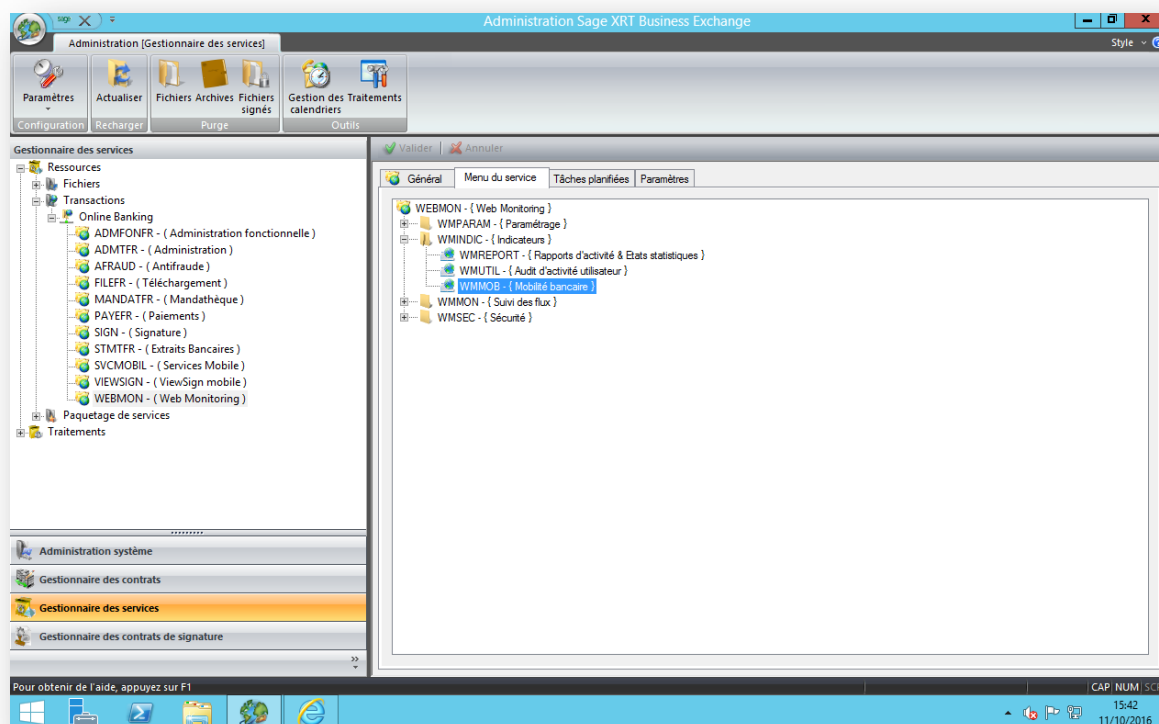

The presence of a file service corresponding to Flow 5 must be checked.

A Flow 5 File Service is available by default under Reports family.

## Contract Manager

Access rights must be set up depending on users profiles.

## Converting to CSV Format

### Flux\_5\_CSV Processing

Flow 5 is an XML format. However, files conversion to CSV is available, making their processing through ERP easier.

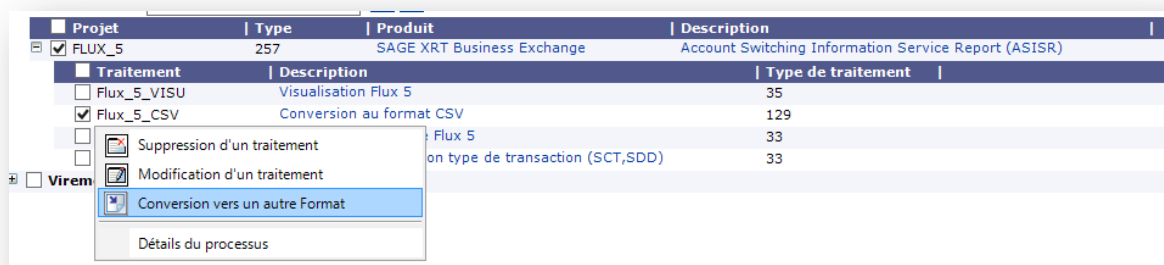

Under **Reports** family, use the processing: **Flux\_5\_CSV**

It only accepts the files containing one XML message with or without Name Spaces.

### Flow 5 XML Files

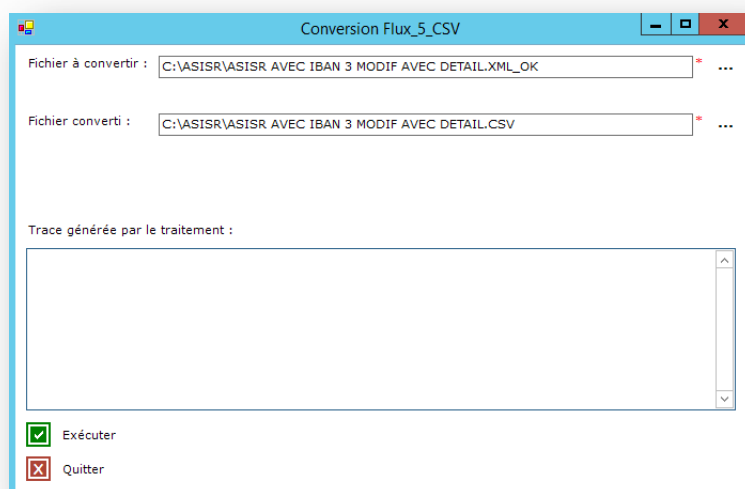

In Sage Common Services, start the **Flux\_5\_CSV** processing and click on the action: Conversion to other format.

Select a file to convert. Specify the converted file path and name, and click the Execute button.

## Converting to CSV Format

Post-Transfer Exit: Flow 5 XML to CSV

## Post-Transfer Exit: Flow 5 XML to CSV

When creating the Post-Transfer Exit, execute the processing **F5\_CSV** included by default.

It uses PSFRCD.EXE with the following arguments:

```
/ACTION:TOCSV /FMTPROJECT:FLUX_5 /FMTWORK:Flux_5_CSV "/F:%#F.txt" "%#F"
```

## Format Description

A record consists of all the data below. Each element is separated with ' ; '

Separator ( ; )

Date and Time Format (DDMMYYYYHHMMSS)

Date and time of file change

Message ID

Date and time of creation

Bank issuing message

Transaction Issuer

Account IBAN of Transaction Issuer

Number of modifications

Reason

Here is the CSV file organization:

Info at file level	Info Modification 1	Transaction 1 concerned by modification 1
		Transaction 2 concerned by modification 1
		Transaction 3 concerned by modification 1
		Transaction 4 concerned by modification 1
	Info Modification 2	Transaction 1 concerned by modification 2
		Transaction 2 concerned by modification 2
		Transaction 3 concerned by modification 2
		Transaction 4 concerned by modification 2
		Transaction 5 concerned by modification 2

## Reports

Flow 5 is an XML format. To optimize file processing, two PDF reports are available:

- Report presenting the list of third party domiciliation modifications
- Report presenting the list of third party domiciliation modifications, plus the list of the transactions concerned by this modification

### Flux\_5\_VISU Processing

Under **Reports** family, use **Flux\_5\_VISU** to get the list of third party domiciliation modifications (without the mention of the corresponding transactions) included in the file.

It only accepts the files containing one XML message with or without Name Spaces.

### Flux\_5\_VISU\_DET Processing

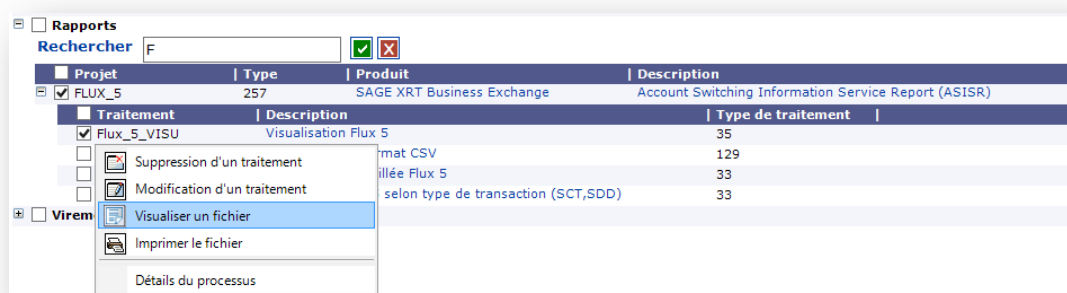

Under **Reports** family, use **Flux\_5\_VISU\_DET** to get the list of third party domiciliation modifications with the mention of the corresponding transactions, included in the file.

It only accepts the files containing one XML message with or without Name Spaces.

## Viewing Data from Sage Common Services

Select **Flux\_5\_VISU** or **Flux\_5\_VISU\_DET** and View File.

## Post-Transfer Exit: Editing Flow 5 XML Files

When creating the Post-Transfer Exit, execute the processing **F5\_EDIT** included by default.

It uses PSFRCD.EXE with the following arguments:

```
/ACTION:EDIT /FMTPROJECT:FLUX_5 /FMTWORK:Flux_5_VISU /EDITFORMAT:P "/F:/%#F.pdf"  
"%#F"
```

## Breakdown

Flow 5 is an XML format providing:

- the list of third party domiciliation modifications
- the list of the transactions affected by this modification for each modification There are three types of affected transactions:
  - o SCT from Transfers family
  - o SDD Core from Issued Direct Debits family
  - o SDD B2B from Direct Debits family

### Flux\_5\_SPLIT\_FMLY Processing

Under **Reports** family, use **Flux\_5\_SPLIT\_FMLY** to get the breaking down of the original file into families of implicated transactions (Transfers or Direct Debits).

The breakdown criterion is the family specified into the file in the tag: `<TlsDtIs><BkTxCd><Domn><Fmly><Cd>` which may contain IDDT or ICDT.

The names for the broken down files contain `_IDDT` or `_ICDT`.

The breaking down process always generates two files, even if one is empty.

It only accepts the files containing one XML message with or without Name Spaces.

### Flux\_5\_SPLIT\_SUBFMLY Processing

Under **Reports** family, use **Flux\_5\_SPLIT\_SUBFMLY** to get the breaking down of the original file into subfamilies of implicated transactions (SCT, SDDCORE, SDDDB2B).

The breakdown criterion is the subfamily specified into the file in the tag: `<TlsDtIs><BkTxCd><Domn><Fmly><SubFmlyCd>` which may contain ESCT, ESDD or BBDD.

The names for the broken down files contain `_ESCT`, `_ESDD` or `_ESBB`.

The breaking down process always generates three files, even if one is empty.

It only accepts the files containing one XML message with or without Name Spaces.

## Breaking Down Files from Sage Common Services

Select **Flux\_5\_VISU** or **Flux\_5\_VISU\_DET** and View File.

Select the file to edit and click **Execute**.

### Post-Transfer Exit: Breaking Down Flow 5 XML Files

When creating the Post-Transfer Exit, execute the processing **F5\_ECLAT** included by default (Breaking down by subfamily).

It uses PSFRCD.EXE with the following arguments:

```
/ACTION:SPLIT /FMTPROJECT:FLUX_5 /FMTWORK:Flux_5_SPLIT_SUBFMLY "%#F"
```

## Data Display in Webmonitoring

### Post-Transfer Exit

The executable file placed at the installation root, manages the dematerialization of Flow 5 info into Sage XRT Business Exchange database. PSFRDC.exe

When creating the Post-Transfer Exit, execute the processing **F5\_IMP** included by default.

It uses PSFRCD.EXE with the following arguments:

```
/ACTION:IMPORT /P:%#P /T:%#T /C:%#VC /S:%#S "/DSN:%#DSN" "%#F"
```

Do not forget to activate the exit in the command list of the Post-Transfer Exit tab.

It only accepts the files containing one XML message with or without Name Spaces.

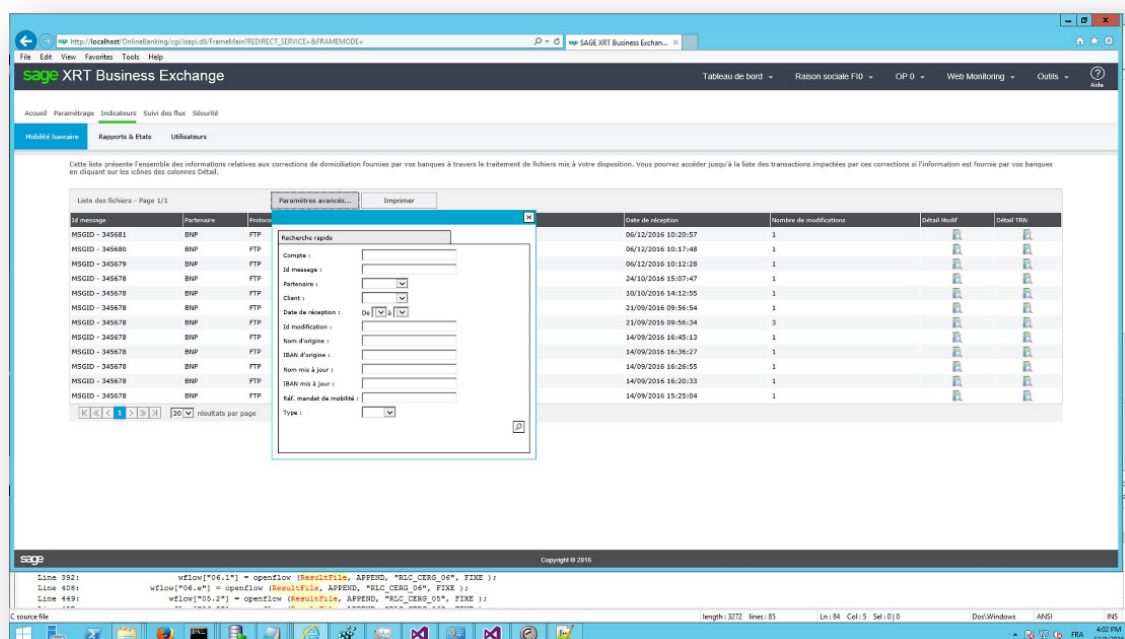

### Viewing Data

You can see the info from Flow 5 Files in **Indicators – Bank Mobility**.

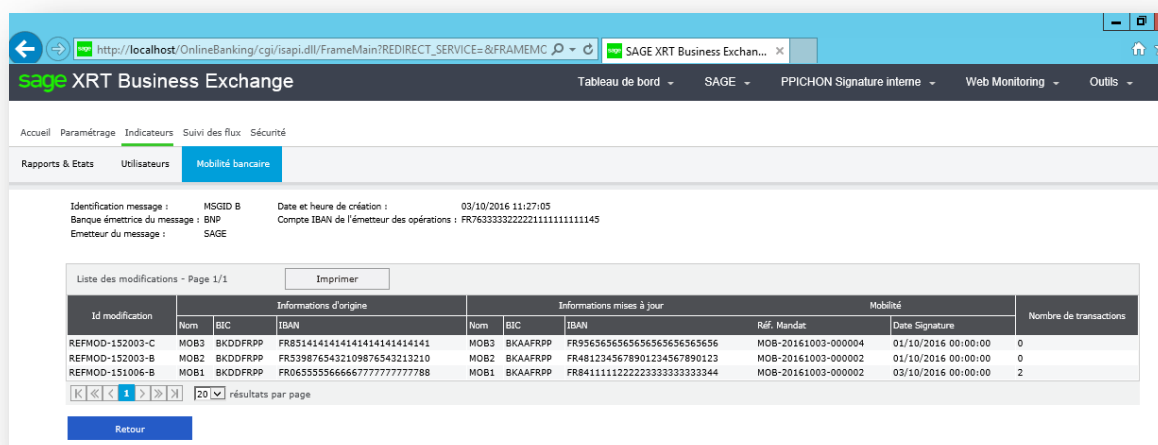

The list of these files is displayed.

Id message	Partenaire	protocole	Service	Client	Compte	Date de réception	Nombre de modifications	Détail Modif	Détail TRN
MSGID B	BNP	HTTP	FLUX5	SAGE	FR7633333222211111111111145	03/10/2016 11:27:05	3		

You can search it when clicking the button: **Advanced Parameters**.

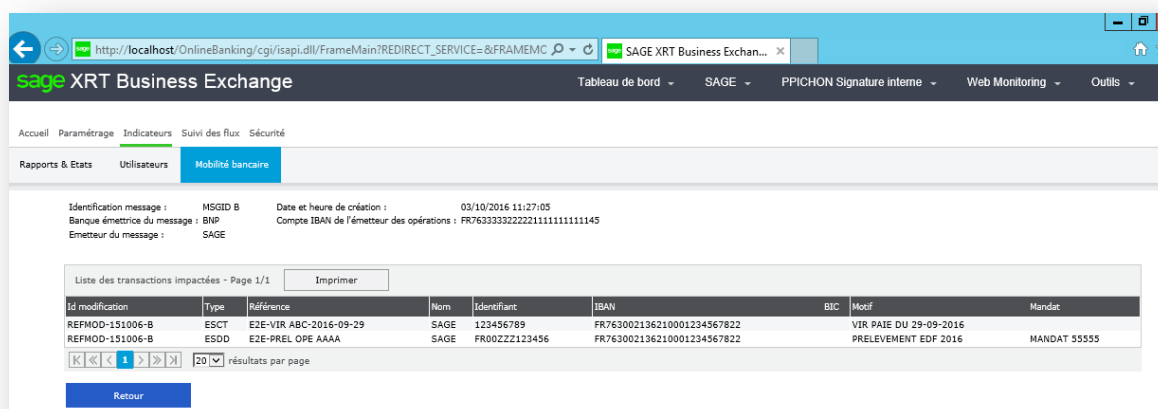

Click **Modif. Détails** to access the list of the modifications contained in the file, such as the original info and the updated info.

The **Back** button takes you back to the file list.

Click **TRN Détails** to access the list of the transactions with modifications contained in the file.

The screenshot shows the Sage XRT Business Exchange web application. The browser address bar displays a local host URL. The application header includes the Sage logo and navigation links like 'Tableau de bord', 'SAGE', 'PPICHON Signature interne', 'Web Monitoring', and 'Outils'. The main menu has tabs for 'Accueil', 'Paramétrage', 'Indicateurs', 'Suivi des flux', and 'Sécurité'. The 'Indicateurs' tab is active, showing sub-tabs for 'Rapports & Etats', 'Utilisateurs', and 'Mobilité bancaire'. The 'Mobilité bancaire' sub-tab is selected, displaying transaction details and a list of impacted transactions.

The **Back** button takes you back to the file list.

## Update of Third Party in Payments

### Post-Transfer Exit

The executable file placed at the installation root, manages the use of Flow 5 info to update third parties in Payments: IMPVIR.exe

When creating the Post-Transfer Exit, execute the processing **IMPRCD** included by default.

It uses IMPVIR.EXE with the following arguments:

*/P:Entity alias /U:User alias /F:BENEFRCDD /R:c:\rapport.htm %#F*

Click **OK** to finish creating the processing.

Do not forget to activate the exit in the command list of the Post-Transfer Exit tab.

It only accepts the files containing one XML message with or without Name Spaces.

### Viewing Data

Third Party List in **Payments** includes the column: **Corr. Dom.** The icon within this column indicates that the third party has been updated thanks to the received domiciliation corrections.

A search function is also available.

Les tiers ainsi que leurs banques et/ou comptes doivent être créés préalablement à la saisie des transactions de paiement. Lors de la création d'une transaction, vous sélectionnez un tiers existant. Les tiers existants sont listés de manière synthétique. Pour créer un nouveau tiers, cliquez sur le bouton "Ajouter un tiers". Pour visualiser en détail les informations relatives à un tiers ou pour le modifier ou supprimer, cliquez sur son nom. Vous pouvez alimenter directement la liste d'exclusion du module Antifraude grâce au bouton Exclure avec l'aide d'un assistant.
